

SURFACE TRANSPORTATION BOARD

DECISION

Docket No. EP 290 (Sub-No. 5)

(2022-3)

QUARTERLY RAIL COST ADJUSTMENT FACTOR

Digest:<sup>1</sup> The rail cost adjustment factor (RCAF) is an index formulated to represent changes in railroad costs incurred by the nation's largest railroads over a specified period of time. The Surface Transportation Board (Board) is required by law to publish the RCAF on at least a quarterly basis. Each quarter, the Association of American Railroads computes three types of RCAF figures and submits those figures to the Board for approval. The Board has reviewed the submission and adopts the RCAF figures for the third quarter of 2022.

Decided: June 16, 2022

In Railroad Cost Recovery Procedures, 1 I.C.C.2d 207 (1984), the Interstate Commerce Commission (ICC) outlined the procedures for calculating the all-inclusive index of railroad input prices and the method for computing the rail cost adjustment factor (RCAF). Under the procedures, the Association of American Railroads (AAR) is required to calculate the index on a quarterly basis and submit it to the agency on the fifth day of the last month of each calendar quarter. In Railroad Cost Recovery Procedures—Productivity Adjustment, 5 I.C.C.2d 434 (1989), aff'd sub nom. Edison Electric Institute v. ICC, 969 F.2d 1221 (D.C. Cir. 1992), the ICC adopted procedures that require the adjustment of the quarterly index for a measure of productivity.

The provisions of 49 U.S.C. § 10708 direct the Surface Transportation Board (Board) to continue to publish both an unadjusted RCAF and a productivity-adjusted RCAF. In Productivity Adjustment—Implementation, 1 S.T.B. 739 (1996), the Board decided to publish a second productivity-adjusted RCAF called the RCAF-5. Consequently, three indices are now filed with the Board: the RCAF (Unadjusted); the RCAF (Adjusted); and the RCAF-5. The RCAF (Unadjusted) is an index reflecting cost changes experienced by the railroad industry, without reference to changes in rail productivity. The RCAF (Adjusted) is an index that reflects national average productivity changes as originally developed and applied by the ICC, the calculation of which is currently based on a five-year moving average. The RCAF-5 is an index

---

<sup>1</sup> The digest constitutes no part of the decision of the Board but has been prepared for the convenience of the reader. It may not be cited to or relied upon as precedent. See Pol'y Statement on Plain Language Digs. in Decisions, EP 696 (STB served Sept. 2, 2010).

that also reflects national average productivity changes; however, those productivity changes are calculated as if a five-year moving average had been applied consistently from the productivity adjustment's inception in 1989.

The index of railroad input prices, RCAF (Unadjusted), RCAF (Adjusted), and RCAF-5 for the third quarter of 2022 are shown in Table A of the Appendix to this decision. Table B shows the first quarter 2022 index and the RCAF calculated on both an actual and a forecasted basis. The difference between the actual calculation and the forecasted calculation is the forecast error adjustment.

AAR's calculations have been examined by the Board's Office of Economics, and the Board finds that AAR has complied with agency procedures. The Board finds that the third quarter 2022 RCAF (Unadjusted) is 1.250, an increase of 4.4% from the second quarter 2022 RCAF (Unadjusted) of 1.197. The RCAF (Adjusted) is calculated, in part, using the RCAF (Unadjusted) and a five-year moving geometric average of productivity change for U.S. Class I railroads from 2016-2020, which is 1.025 (2.5% per year). The third quarter 2022 RCAF (Adjusted) is 0.512, an increase of 3.9% from the second quarter 2022 RCAF (Adjusted) of 0.493.<sup>2</sup>

In accordance with Productivity Adjustment—Implementation, 1 S.T.B. at 748-49, the RCAF-5 for this quarter will use a productivity trend for the years 2015-2019, which is 1.008 (0.8% per year). The RCAF-5 for the third quarter of 2022 is 0.487, an increase of 4.3% from the second quarter 2022 RCAF-5 of 0.467.<sup>3</sup>

This action is categorically excluded from environmental review under 49 C.F.R. § 1105.6(c).

Authority: 49 U.S.C. § 10708.

It is ordered:

1. The Board finds that the third quarter 2022 RCAF (Unadjusted) is 1.250, RCAF (Adjusted) is 0.512, and RCAF-5 is 0.487.

2. Notice of this decision will be published in the Federal Register.

---

<sup>2</sup> The third quarter 2022 RCAF Adjusted (0.512) is calculated by dividing the third quarter 2022 RCAF Unadjusted (1.250) by the third quarter productivity adjustment factor (PAF) of 2.4436. The third quarter 2022 PAF is calculated by multiplying the second quarter 2022 productivity adjustment of 2.4285 by the fourth root (1.0062) of the 2016-2020 annual average productivity growth rate of 2.5%.

<sup>3</sup> The third quarter 2022 RCAF-5 (0.487) is calculated by dividing the third quarter 2022 RCAF Unadjusted (1.250) by the third quarter productivity adjustment factor-5 (PAF-5) of 2.5687. The third quarter 2022 PAF-5 is calculated by multiplying the second quarter 2022 PAF-5 of 2.5636 by the fourth root (1.0020) of the 2015-2019 annual average productivity growth rate of 0.8%.

3. The effective date of this decision is July 1, 2022.

By the Board, Board Members Fuchs, Hedlund, Oberman, Primus, and Schultz.

8	WEIGHTED AVERAGE	100.0%	327.5	329.5
9	LINKED INDEX		306.9	308.8
10	RAIL COST ADJUSTMENT FACTOR		116.0	116.7

**Endnotes:**

---

<sup>1</sup> “Other Items” is a combination of Purchased Services, Casualties and Insurance, General and Administrative, Other Taxes, Loss and Damage, and Special Charges, price changes for all of which are measured by the Producer Price Index for Industrial Commodities Less Fuel and Related Products and Power.

<sup>2</sup> Linking is necessitated by a change to the 2019 weights beginning in the fourth quarter of 2020. The following formula was used for the current quarter’s index:

$$\frac{\text{3rd Qr. 2022 Index}}{\text{(2020 Weights)}} \text{ Times } \frac{\text{2nd Quarter Linked Index}}{\text{(1980 = 100 Linked)}} \text{ Equals } \frac{\text{Linked Index}}{\text{(Current Quarter)}}$$

Or

$$\frac{350.8}{334.9} \times 313.8 = 328.7$$

<sup>3</sup> The first quarter 2018 RCAF was re-based using the October 1, 2017 level of 264.5 in accordance with the requirements of the Staggers Rail Act of 1980 (10/1/2017 = 100).

<sup>4</sup> The third quarter 2022 forecast error adjustment was calculated as follows: (a) first quarter 2022 RCAF using forecasted data equals 116.0; (b) first quarter 2022 RCAF using actual data equals 116.7; and (c) the difference equals the forecast error (b-a) of 0.7. Because the actual first quarter value is greater than the forecast value, the difference is added to the Preliminary RCAF.
